

### Week 3: Meeting #4 (In Class)

April 14, 2014

Group #4

---

- Andrew was absent due to illness. He has been communicating via internet.
- Group members had a lot of trouble over the weekend that inhibited progress.

Problems included:

- Installing github
  - pulling and pushing the git repository
  - pushing tex files
  - finding the codebook/data directory
- Heather had based her question on the 2014 survey; however, she found that surveys prior to 2012 did not contain questions about household access to computers and/or internet. This made it *impossible* for her to answer her original question of interest.
  - Heather is changing her question to looking at the type of energy that homes are using and the amount spent on electricity in households. These will be compared across states. We are specifically interested in looking at trends of "clean" energy.

### Proposed Assignment

- Assignment from Meeting #3 is being extended to Wednesday April 16th.
